

Splitter & Bridge Adapters

ACTON's splitter and bridge adapters allow two services to be run over one UTP cable. The adapters plug into a single outlet and provide two jacks for connection to the supported services.

The adapters are useful where it is difficult to run an additional cable but the supported services are more limited than with a generic cabling system.

Six types of adapter are offered with different internal wiring to support specific services.

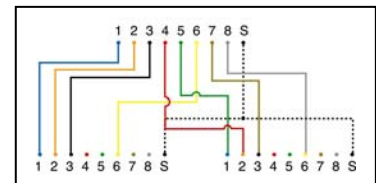

Data Splitter

The data splitter connects pairs 1 & 2 of T568A/B wiring to jack 1 and pairs 3 & 4 to jack 2. Either jack will support 10BASE-T Ethernet.

Ordering Information:

C5SP - Cat 5 Data Splitter, 8P8C Plug to 2 x Jacks

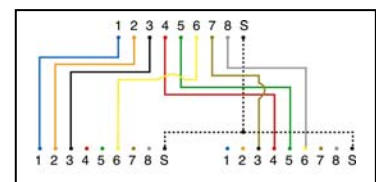

Voice/ Data Splitter

The voice/ data splitter connects pairs 1 & 2 of T568A/B wiring to jack 1 and pairs 3 & 4 to jack 2. Jack 1 will support 10BASE-T Ethernet and Jack 2 will support voice.
